

INDEX OF AUTHORS' NAMES.

ABSTRACTS. 1879.

A.

- Abel, F. A., recent contributions to the history of detonating agents, 846.
 Abel. See also Noble.
 Abt, A., continuous spectrum of the electric spark, 765.
 Adam, A., new and rapid process for analysis of butter, 80.
 Adams, F. D., presence of chlorine in scapolites, 697.
 Ador, E. A., and J. M. Crafts, action of phthalic anhydride on naphthalene in presence of aluminium chloride, 940.
 Ador, E., and A. Rilliet, hydrocarbons produced by the action of methyl chloride on benzene in presence of aluminium chloride, 228, 527.
 Ador. See also Friedel.
 Adrianowsky, A., action of acetic and sulphurous anhydrides on aluminium chloride, 620, 915.
 Albert, H., and L. Siegfried, estimation of the value of superphosphates, 967.
 Allen, A. H., distinctive tests for phenol, cresol, and creosote, 182.
 — petroleum spirit and benzene, 1063.
 — presence of nitrogen in steel, 1017.
 Allihn, F., compounds of ethyl monochloroacetate, 915.
 Amayat, E. H., compressibility of gases at high pressures, 1004.
 Andreasch, R., ash of the garden pink and rose, 338.
 — decomposition of ammonium formate by heat, 705.
 Andreoni, G., nicotine, 731.
 Andrews, T., curious concretion-balls derived from a colliery mineral water, 1024.
 Annaheim, J., tetranitro-oxy-sulphobenzide, 244.
- Anschrütz, R., action of ethyl iodide on the silver salts of maleic and fumaric acids, 223.
 Anschrütz, R., and L. P. Kinnicutt, phenylglyceric acid, 644.
 Anschrütz, R., and G. Schultz, phenanthrenequinone, 538.
 Ansdell, G., physical properties of liquid acetylene, 1028.
 Arata, P. N., alkaloid of *Baccharis cordifolia*, 1045.
 Arnold, A. E., phosphorus in ancient iron, 1074.
 — solubility of stannic oxide in hydrochloric acid, 888.
 Aronheim, B., action of nitrous acid on resorcinol ethers, 465.
 — action of nitrous acid on stannic phenyl chloride, 651.
 — on Schützenberger's chlorine and iodine acetates, 452.
 — synthesis of the compounds of phenyl with tin, 249.
 Arzruni, A., crystallographical and chemical examination of some arsenical pyrites, 900.
 Aschenbrandt, H., paradiethylbenzene from paradibromobenzene, 920.
 Attenkofer, G., a simple gas-holder, 877.
 Auerbach, F., the passage of the galvanic current through iron, 686.
 Austen, P. T., on dinitro-paradibromobenzenes and their derivatives, 50.
 Ayerton, W. E., electrical properties of bees' wax and lead chloride, 427.

B.

- Babcock. See Hübner.
 Baeyer, A., action of phosphorus pentachloride on isatin and allied compounds, 535.
 — diphenylphthalide and phenylphthalin, 636.

- Baeyer, A., synthesis of chinoline, 946.
 — the indigo-blue group, 937.
- Balbiano, L., α -isochlorobutyric acid and its derivatives, 615.
- Balland, waters of the Chélif, 699.
- Ballo, M., action of dehydrating agents on camphoric and camphoramic acids, 539.
 — mineral waters of Buda-Pesth, 125.
- Balsohn, M., action of ethylene on benzene in presence of aluminium chloride, 785.
- Baltus. See Béchamp.
- Bancel, C., and C. Husson, phosphorescence of lobster's flesh, 665.
- Bandrowski, E., reaction of dibromosuccinic acid with water, 523.
- Bantlin, A., metanitrophenol and its derivatives, 237.
- Barbieri, J., albuminoids of gourd seeds, 272.
- Barbieri. See also Schulze.
- Bardy, C., and L. Bordet, estimation of methyl alcohol in wood spirit, 487.
 — preparation of methyl formate and pure methyl alcohol, 520.
- Barth, L., dioxybenzoic acids, 157, 644.
 — thymoloxycuminic acid, 158.
- Barth, L., and G. Goldschmidt, ellagic acid, 930.
- Barth, L., and M. v. Schmidt, derivatives of α -phenoldisulphonic acid, 933.
- Barth, L., and J. Schreder, action of fused soda on phenol. Synthesis of phloroglucinol, 633.
 — diphenol, 64.
 — fusion of aromatic acids with soda, 926.
 — oxidation of resorcinol to phloroglucinol, 633.
- Barral, J., nitrates in beet-roots, 337.
- Barsylowsky, azo-derivatives of toluene, 237.
- Barus, C., the thermoelectric position and electric conductivity of steel in their relation to hardness, 999.
- Baubigny, H., the oxide of nickel, Ni_2O_3 , 299.
- Baudrimont, A., influence of coloured light on the evaporation of water, 863.
- Bauer, M., the crystal system of potash mica, 24.
 — the hydrohæmatite of Neuenberg, 604.
- Baumann, E., behaviour of phenol in the animal organism, 816.
 — hydrogen-phenol sulphate and similar derivatives of the phenols, 148.
- Baumann, E., and L. Brieger, formation of cresols during putrefaction, 789.
 — — paracresol, 789.
- Baumann, E., and C. Preusse, bromophenolmercapturic acid, 803.
 — — oxidation and synthesis in the animal organism, 814.
- Baumann, E., and F. Tiemann, constitution of indigo, 806, 935.
- Baumhauer, H., "etch figures" on quartz crystals, 439.
- Baur, A., dimethylparaphenylenediamine thiocarbamide, 628.
- Bayley, T., analysis of alloys containing copper, zinc, and nickel, 485.
 — catalysis, 501.
 — complex oxides of cobalt and nickel, 507.
- Beamer, M., and F. W. Clarke, aniline salts, 785.
 — — lithium picrate, 789.
- Béchamp, A., formation of carbonic anhydride, alcohol, and acetic acid by yeast alone in presence and absence of oxygen, 663.
 — influence of oxygen on alcoholic fermentation, 735.
- Béchamp, J., nature of the albumins in hydrocele, 550.
- Béchamp, J., and E. Baltus, modification effected by the animal organism on various albuminoid substances when injected into the veins, 334.
- Bechi, the proper time for pressing olives, 1080.
- Bechi, G. v., new mode of formation of ketones, 529.
 — succinyl compounds of the toluidines, 461, 527.
- Beck, C., dioxypdiphenylmethane, 324.
- Becker, G. F., reduction of weighings in air in chemical analysis to a vacuum, 396.
- Beckmann, E. O., oxidation of products of diethyl sulphide and analogous compounds, 37.
- Beckurts, H., and R. Otto, mode of action of sulphuric monochloride, 229.
 — — sulphuric monochloride and dichloride, 200.
 — — synthesis of aromatic sulphones, 242.
- Bequerel, E., on a note by Lamansky on Stokes's law, 862.
- Bequerel, H., magnetic rotatory power of gases at ordinary temperatures and pressure, 576.
- Beetz, W., conductivity of liquids for heat, 1001.
 — electric conductivity of zinc sulphate solution, 864.

- Beetz, W., excitation of electricity by the contact of solid and gaseous bodies, 348.
- Beilstein, F., perchlorophenol chloride, 463.
- separation of zinc from nickel, 276.
- Beilstein, F., and L. Jawein, estimation of cadmium, 746.
- estimation of zinc, 672.
- treatment of Bunsen's cells, 576.
- Beilstein, F., and A. Kourbatoff, dinitrochlorobenzene, 376.
- nitrophthalic acid obtained by oxidation of nitronaphthalene, 644.
- oxidation of bromonaphthalene, 807.
- oxidation of nitronaphthalene, 722.
- action of hydrogen sulphide on certain nitro-compounds, 230.
- chloranilines, 143.
- chloronitrilines, 309.
- formation of chlorophenylene-diamine, 144.
- Beketoff, M., determination of the atomic heat of hydrogen in its combination with palladium, 590.
- heat of hydration of sodium oxide and the action of sodium hydroxide and of hydrogen on sodium oxide, 689.
- Bell, C. A., pyrrol derivatives, 525.
- Bell, C. A., and E. Lapper, dry distillation of ammonium salts of saccharic acid, 524.
- Bell, C. J., action of phosphorus pentachloride on saccharic acid, 917.
- Bell, H. L., manufacture of crucible steel, 1076.
- Bell, J. L., separation of carbon, sulphur, and phosphorus in the open hearth, puddling furnace, and Bessemer-converter, 185.
- Bellucci, supposed existence of hydrogen peroxide in the organism of plants, 665.
- Bemmelen, J. M., absorptive power of soils and of silica, 339, 552.
- Bender, R., analysis of alloys employed as stopping for teeth, 1076.
- Bendix, J., derivatives of ortho-nitrophenol, 314.
- Benedikt, R., pentabromoresorcinol, 55, 464.
- tribromophenol bromide and tribromoresorcinol bromide, 717.
- trinitroso- and trinitro-phloroglucin, 57.
- Benedikt. See also Weselsky.
- Beins, H., preparation of carbonic anhydride under any desired pressure, 676.
- Bennett, W. Z., and H. B. Hill, dichloroacrylic acid, 616.
- Bennath, H. E., Macagno's investigations on bottle-glass, 562.
- Berend, L., isodulcitol, 40.
- Bernheimer, O., organic ferricyanogen compounds, 611.
- Bernthsen, amidines and thiamides of monobasic organic acids, 922.
- Bernthsen, A., and H. Klinger, sulphine compounds of thiocarbamide, 650.
- Bernthsen, A., and H. Trompeter, amidines and thiamides of monobasic organic acids, 146.
- Bersch, J., cultivation of pure beer-yeast, 1046.
- Bert, P., region of the solar spectrum which is indispensable to vegetable life, 336.
- Berthelot, action of organic solvents on sulphur and on metallic sulphides, 771.
- amalgams of the alkali-metals and the nascent state, 864.
- changes which wine undergoes when kept, 763.
- chemical constitution of amalgams of the alkali-metals, 883.
- combination of carbonic oxide with the elements, 591.
- decomposition of haloid acids by metals, 589.
- direct combination of cyanogen with hydrogen and the metals, 909.
- etherification, 866.
- explosive mixtures of air with combustible powders, 412.
- formation of haloid ethers in the gaseous state, 435.
- heat of formation of cyanogen, 767.
- hydrogenation of benzene and aromatic compounds, 376.
- influence of metallic chlorides on etherification, 449.
- observations on Noble and Abel's memoir on the combustion of gun-powder, 875.
- ozone and the silent electric discharge, 435.
- oxidation of nitrous acid by ozone and by moist oxygen, 9.
- reaction between mercury and hydrochloric acid gas, 298.
- reciprocal displacements between oxygen, sulphur, and the halogens when combined with hydrogen, 296.
- relative affinities and reciprocal

- displacements of oxygen and the halogen elements, 351.
- Berthelot, remarks on a note on chloral hydrate by Wurtz, 1006.
- some thermochemical data, 874.
- transformation of sugar into alcohol by a purely chemical method, 778.
- Bertram, J., excretion of phosphoric acid by herbivora, 392.
- Bertrand, E., cinnabar crystals from California, 440.
- the crystal form and twin-formation of leucophane, 442.
- Berwerth, F., examination of lithiamica from Paris (Marne), Rozena, and Zinnwall, 23.
- Beyrich, C., process for bleaching vegetable fabrics, 761.
- Bichat, E., magnetic rotatory power of vapours, 577.
- Biefel. See Poleck.
- Biel, J., investigation of American and Russian petroleum, 1076.
- Biermann, E. W. L., manganese alloys, 186.
- Binder, F., dimethylparaphenylene-diamine carbamides, 627.
- Binder. See also Fittig.
- Bindschedler and Busch, manufacture of resorcinol, and of eosin and other derivatives of resorcinol, 291.
- new fast green, or malachite green, 571.
- Bischof, G., estimation of traces of lead, 402.
- sanitary notes on potable water, 985.
- Bischoff. See Hilger; also Wallach.
- Blankenhorn, A., aëration of must, 492.
- Blankenhorn, A., and H. W. Dahlen, fermentation of must, 993.
- Blankenhorn. See also Gamgee.
- Blas, M., detection of salicylic acid in beer, 342.
- Blattner. See Michler.
- Bleibtren. See Wallach.

- Brögger, W. C., occurrence of thomsonite at Låven, 605.
- the crystal system of mosandrite, 608.
- Bronner, use of Hempel's lamp for illustrating silver assay as a lecture experiment, 402.
- Brown, J., theory of voltaic action, 426.
- Brown, W. G., philippium, 204.
- Brühl, J. W., limits to the application of the method of determining vapour-densities in the barometric vacuum, 499.
- preparation of divaleryl, 520.
- purification of mercury, 508, 602.
- Brunner, H., desoxalic acid, 619.
- improvements in the manufacture of alkali, 422.
- Brush, G. J., and E. S. Dana, a new and remarkable mineral locality in Fairfield Co., Connecticut, U.S.A., 891.
- new minerals from Fairfield Co., Connecticut, 20.
- Bruylants. Essence of rosemary, 725.
- Buchka, K., reduction of acetophenone, 61.
- Buchner. Adulteration of bees' wax, 675.
- Büchner, E. W., red and yellow ultramarine, 885.
- Büchner, E. W., ultramarine, 597.
- Büchner and Tschermak, the meteoric iron of Hungen, 366.
- Bühlig, H., cerium aniline black, 682.
- Buisine. See Du villier.
- Bunge, G., behaviour of potassium salts in the blood, 816.
- Bunge, N., composition of beetroot gum, 912.
- Bungener. See Graebe.
- Burger, H., spectroscopic investigation of the constitution of liquids, 101.
- Burger. See also Liebscher.
- Burghardt, C. A., occurrence of diop-tase on chrysocolla from Peru, 30.
- the origin of some ores of copper, 17.
- Buri, E., Japanese wax, 1037.
- Busch. See Bindschedler.
- Byk, S., removal of sulphur from guanidine thiocyanate, 614.

C.

- Cahours, A., iodides of stannopropyl, 622.
- Cahours, A., and E. Demarçay, acids obtained by distilling the crude acid from the saponification of fats in a current of steam, 1036.
- iodides of stannobutyl and stannamyl, 919.
- stannopropyls and stannisopropyls, 918.
- Cahours, A., and A. Etard, a new nicotine derivative, 732.
- Cailletet, L., compressibility of gases, 429.
- a test for tartaric acid, which distinguishes it from citric acid, 674.
- Calm, A., constitution of parabanic acid, 620.
- vapour-density of aqueous acids with constant boiling points, 579.
- Cameron, C. A., amount of solids in milk, 490.
- estimation of lead as lead iodate, 484.
- preliminary notes on the absorption of selenium by plants, 955.
- the varying composition of well water, 485.
- Cannizzaro, S., and Carnelutti, two isomerides of santonin, 330.
- Cannizzaro, S., and L. Valente, santonin derivatives, 331.
- Carnelley, T., relation between the melting-points of the elements and their coefficients of expansion by heat, 588.

- Carnelutti. See Cannizzaro.
- Carnot, A., mallardite, a new natural manganese sulphate; and luckite, a new variety of iron sulphate, 901.
- use of sulphuretted hydrogen in the dry way in analyses, 963.
- Caro, H., and C. Graebe, rosolic acids, 59.
- Caro, H., and Schraube, phenoldiazobenzene, 148.
- Casamajor, P., influence of temperature on the deviation of polarised light by solutions of inverted sugar, 832.
- Castan, F., estimation of minute quantities of soda in potassium nitrate, 399.
- Cazeneuve, P., detection and estimation of salicylic acid in animal secretions, 488.
- estimation of glucose in the blood, 557.
- separation and estimation of hippuric acid, 748.
- Cech, C. O., preparation of rosemary oil, 97.
- Chapuis and Linnossier, presence of lead in bismuth subnitrate, 80.
- Christiani, W., effect of manure on crops, 826.
- Church, J. A., combustion in the blast-furnace, 841.
- Ciamician, G., influence of temperature and pressure on the spectra of vapours and gases, 101, 685.
- reduction-products of Elemi-resin with zinc-dust, 69.
- spectra of the elements and their compounds, 685.
- Claesson, P., ethereal sulphates of polyhydric alcohols and carbohydrates, 1033.
- methyl and ethyl sulphates, 775.
- Claisen, L., amides of phenylglyoxylic acid, 649.
- benzoic cyanide and phenylglyoxylic acid, 647.
- Claisen, L., and F. H. Morley, new method of preparing phenylglyoxylic acid, 322.
- Claisen, L., and J. Shadwell, synthesis of pyrrocemic acid, 45.
- synthesis of isatin, 534.
- Clarke, F. W., electrolytic estimation of mercury, 976.
- specific gravity determinations, 295, 1004.
- Clarke, J. W., some selenocyanates, 35.
- Clarke. See also Beamer.
- Classen, A., a new quantitative analytical method of manifold application, 969.
- Classen, A., estimation of cobalt, nickel, and zinc by precipitation as oxalates, 1054.
- new method of separating ferric and aluminium oxides from manganese, 1055.
- separation of manganese from zinc, 1055.
- Claus, A., cinchona alkaloids, 168.
- Claus, C. F., improvements in the manufacture of sulphide and other compounds of zinc, and in the production of bye-products resulting therefrom, 423.
